- 3 What to Keep?

Instruction

- Congratulations if you passed
- If you did not pass:
 - If you send me your correction before 9th of may and you will get your feedback before the 18th.
 - Do not redo parts that you already passed, I will not look at them.
 - If just FST question 1 is wrong. You can just write your answer in the core of your email message. No need for PDF in this case.
- Look at both your copy and the progress on studentportalen.

Feedback: to be Improved

List of problems : number of students concerned

- Deadline Handling : 5/10
- Sent seg: are you sure you add an empty line =`\n \n`? : 3/10
 - Did you not show it explicitly(=pb of presentation)
 - Did you forget to do it (=pb of instruction reading)
 - You know that you have to do it. But you cannot (=pb of lack of practice)
- What about recall and precision? : 10/10
- Number of tok/sent seg is only one data! And does not constitute a solid demonstration
 - Lack of scientific approach?
 - Scared of admitting it?
 - Other?

Conclusion on Things to Improve

Look at those mistakes, even if you pass. Analyse why it happens, how you can work on improving it? Did you get the same type of errors before? So is it a pattern?

You can always ask for advices around, students, teachers.

Feedback: Good Things

Given by the majority of you:

- Examples
- Look at different sources of errors (encoding, quotes...)

Given by one or 2:

- Percentage error rate
- Frequencies of errors
- Nature of the corpus
- An explanation of what the number really proves
- Name on the states
- Tagset/legend

Conclusion on Good Things

You can as well analyse what is positive and analyse why.

A good thing to do is to find out how did someone else figure out those extra positive items?
